

# BIOLOGICAL AND NUTRITIONAL PRODUCTS

## New Feed Probiotic:

### EPICIN-D

Second generation bacterial ecosystem design for specific pathogenic control in digestive tract: easy to use, doesn't need fermentation, recommended in cases of severe infestations.

## Soil Probiotic:

### EPIZYM-PST

Microbial and enzymatic complex designed to accelerate organic matter degradation ( in anaerobic conditions); restores bad pond soils, improves oxygen levels, increases growth rates and survivals and reduces down time between cycles.

## Grow Out Probiotic:

### EPICIN PONDS

Bacterial ecosystem designed to control pathogenic microorganisms and improve water quality by reducing toxic compounds, such as ammonia, nitrites and hydrogen sulfide. It thereby lowers stress and provides a healthier environment, which results in better survival and animal growth. Used in feed EPICIN microorganisms colonize the animal's digestive tract providing more direct pathogen protection and also improving feed conversion lowering the feed conversion ratio.

## activo® Liquid:

Basic Producer of Essential Oil & Plant Extracts and Microencapsulation The herb and spice extracts contained in activo® Liquid were specifically adapted for aquaculture to increase appetite and to optimize digestion as well as in stressful situations and during stress-free periods. Better feed conversion. Less production of faeces and waste into the environment.
